Abstract (en)

[origin: EP0341568A2] The method for supporting an anchorage head (10, 10') of a tensioned injection anchor (I) on a support (7) provides for the anchorage head (10, 10'), located at a distance from the support (7), to be supported by a distance element after the re-tensioning of one or more tension members (3). A hard granular or hardenable material is fed as a distance element into the intermediate space between support and anchorage head. <IMAGE>
