Abstract (en)

[origin: EP0341605A2] The method for splicing webs, in particular paper webs for the production of corrugated board, envisages joining the beginning of a prepared second web (28) to be drawn off from a roll (6) to a first web (13) running out from a roll (5) at a connection point during web standstill. Then, the first web (13) is cut and the roll (6) of the second web is accelerated by the web tension, so that the roll (6) of the second web (28) is accelerated at the connection point before or during the web standstill due to the exertion of a web tension. <IMAGE>
