Abstract (en)
[origin: EP0341619A2] An applying apparatus for cosmetics is described, which has a rotation mechanism for non-twisting extension of a cosmetic insert (10) from a housing (12) and a cover (14), which can be placed on the housing (12) of the applying apparatus, for protection of the tip (16) of the cosmetic insert (10) during non-usage of the applying apparatus. Inside the cover (14) there is a tip shaper (18) which applies the desired shape to the tip (16) of the insert by cold forming when the cover (14) is placed on. The tip shaper (18) is mounted rotatably inside the cover (14).
