Abstract (en)  
[origin: EP0341766A2] An improved mechanical warewashing process and a mechanical warewashing machine for sequential washing of a series of loads each being subjected to a wash cycle in which it is doused with a wash liquor from a first liquid delivery system, the liquor being collected in a tank disposed below the load and then to a rinse cycle in which it is doused with rinse water from a second liquid delivery system, the wash cycle comprising a treatment during which the load is doused with a relatively small amount of concentrated wash liquor, followed by a soaking period. Preferably, the concentrated wash liquor is delivered via the second liquid delivery system.
