Abstract (en)

[origin: EP0342116A1] The device for depositing slivers of textile fibres in a can, to be used in an installation possessing an intersecting gill box 1 for the formation of at least one sliver which, on exiting, is deposited by a coiler 10' carried by a support 13 in a can 4, 4' supported by a revolving conveyor 7 moving between two active positions, the position of the coiler 10' relative to the revolving conveyor 7 being adjustable in order to adapt it to coaxial cans 4, 4' of different diameters and the coiler 10' rotating about a vertical axis 25 parallel to the vertical axis 8 of the revolving conveyor 7 in order to deposit the sliver into the can 4, 4', is characterised in that the coiler 10' is mounted to rotate about its axis of rotation 25 on a support 13 which can occupy at least two angular positions to be adjusted by rotation about a vertical axis 18 which is eccentric relative to the axis 25 of rotation of the coiler. <IMAGE>
