Abstract (en)

[origin: EP0342122A1] The invention relates to an electrical connector having two jaws (12A, 12B) to be brought closer together under the control of tightening means (19) and suitable for defining between them at least two parallel channels (13, 13') for receiving a main cable (14) and at least one tap cable (14'). <??>According to the invention, there is associated with such an electrical connector, a wedge (10) intended, during tightening, to temporarily maintain one of the said channels (13, 13') at least partially open, and comprising, in order to achieve this, the evanescent abutment means (34) able to give when the jaws (12A, 12B) are the subject of a sufficient attraction on the part of the tightening means (19). <??>Application to electrical tap connectors. <IMAGE>
