Abstract (en)

Adaptable lavatory seat device (1) comprising an adaptable pivoting lavatory seat (4), of a diameter (5) which is reduced in relation to the standard diameter (7), which is placed between two uprights (2, 3), between which a step (50) is placed, situated between the ground and the pivoting axes (20, 30) of the adaptable lavatory seat. Handles such as (22) make it possible to facilitate ascent and lateral equilibrium once in place. Application: Use of standard WC pan by young children in complete safety. Installation is effected by simply resting on an existing standard lavatory seat, on the edges of this pan since the separation d between the uprights is less than the diameter D of the pan, on the ground via the feet of the uprights. <IMAGE>
