Abstract (en)  
[origin: EP0342319A2] Capacitive discharge system for internal combustion engines with a charging capacitor to be charged via a charging diode by a magnet generator with common iron core during in each case one induced positive half-wave, which charging capacitor is discharged by an electronic switch via the primary winding of the ignition coil, one of the voltage half-waves induced in the primary winding by the magnet generator in each case turning on the electronic switch, the charging coil forming part of the ignition coil. <IMAGE>
