Abstract (en)

[origin: EP0342330A2] In order to improve the mode of operation of a device for separating non-magnetic metals, in particular non-ion metals, from a solid mixture by means of a rotating drum (5), in which a rotating magnetic rotor (6) equipped with permanent magnets (9) is arranged, it is proposed, for the purpose of setting the effective region of the alternating magnetic field generated by the magnet rotor (6), to adjust the position of the rotational axis (14) of the magnet rotor (6) in the quadrant (18) of the material ejection zone (20) by swivelling in the circumferential direction and/or radial displacement. <IMAGE>
