Abstract (en)

Fe-based soft magnetic alloy having improved soft magnetic characteristics with high saturated magnetic flux density, characterized in having fine crystal grains and defined by formula (I) $\text{Fe}_{100-a-b-c}\text{Cu}_{a}\text{M}_{b}\text{Y}_{c}$ (I) wherein "M" is at least one element from: groups IVa, Va, VIa of the periodic table, Mn, Co, Ni, Al, and the Platinum group, "Y" is at least one of: Si, B, P, and C, and wherein a, b and c, in atomic % are defined thus: $3 < a \leq 8$ $0.1 < b \leq 8$ $3.1 \leq a+b \leq 12$ $15 \leq c \leq 28$. A dust core made from an alloy powder having fine crystal grains is defined by formula (II) $\text{Fe}_{100-a-b-c-d-e}\text{Cu}_{a}\text{M}_{b}\text{sec}_{c}\text{Si}_{d}\text{Be}_{e}$ (II) wherein "M sec" is at least one element from: Groups IVa, Va, VIa of the periodic table; "M sec" is at least one element from: Mn, Co, Ni, Al, and the Platinum group; and wherein a, b, c, d and e, in atomic %, are defined thus $3 \leq a \leq 8$ $0.1 \leq b \leq 8$ $0 \leq c \leq 15$ $8 \leq d \leq 22$ $3 \leq e \leq 15$ $15 \leq d+e \leq 28$.
