Abstract (en)

The invention relates to a dispenser composed of a tubular container 2 with an upper closure cover 3 for a removable cartridge 10 containing the food products, a control channel 12 with means for tearing a sealing cover 15 of the cartridge 10, a chute 4 directing the food products towards means 6 for metering the latter and means for sealing the chute which are connected to an opening control mechanism. According to the invention, the means 18a for tearing the cover 15 of the cartridge 10 are carried by means 18 for sealing the control channel 12 and are associated with control means 24 which, reacting to the pressure exerted on them by a bearing face 14 of the cartridge 10, are capable of causing the sealing means 18 to move into an opening position, tearing the sealing cover of the cartridge. <IMAGE>
