Abstract (en)  
The present invention relates to a microwave multiplexed filter comprising at least two elementary filters (10, 11) provided with a coupling antenna, shaped like a brace or any other shape, and comprising a common access (14), this access being provided with a brace-shaped coupling antenna, movable in rotation about its axis in order to permit the tuning of the coupling between the antenna and the relevant filter, in which the common access (14), being mounted between the various elementary filters, comprises as many brace antennas (22, 23) as elementary filters (10, 11). <??>Application in particular to radio-link telecommunications. <IMAGE>
