Abstract (en)
The system is composed of an enclosure (1) having two opposite faces, one closed by a retractable curtain (2) behind which is situated a projection screen (3). The outer face of the screen (3) is made from a frosted glass in order to prevent the reflection of the ambient light. On the opposite part, a door (4) provides access to the inside of the enclosure (1), and a projector carrier (5) is situated in proximity to this door (4), mounted on a shock-absorbing device, supporting a projector (5A). The enclosure (1) is coated on the inside with a matt black paint in order to prevent the reverberation of any parasitic light which may enter the enclosure. <IMAGE>
