Abstract (en)

[origin: US4863308A] The present invention relates to a waterproofing complex for the deck of a road structure, which is intended to receive a surfacing course, the said complex comprising: a bottom layer consisting of a mortar containing about 10 to about 15% of aggregate with a diameter of less than 80 μ m, and from about 7.5 to about 9.5% of a bituminous binder based on elastomers, the percentages being expressed by weight relative to the dry aggregate, and a top layer consisting of a bitumen rich in elastomers. It further relates to a process for the waterproof road lining of the deck of a structure.
