Abstract (en)
[origin: EP0344526A2] A junction block (1) for a cable termination unit comprises an insulating body (2) which exhibits receiving recesses (3) into which in each case a clamp (10) is inserted which consists of a connecting contact (8) and a disconnecting or clamping device (9). The connecting contact (8) is constructed as one piece with the disconnecting or clamping device (9) and at least one guide face (30) is provided for a wiring tool (31). This construction makes it possible to use a single-shaft wiring tool (31) such as, for example, a commercially available screwdriver, for wiring, allowing cost savings and simplifications in handling to be achieved. In addition, the junction block (1) exhibits the advantage of a simple and functionally reliable construction. <IMAGE>
