Abstract (en)

[origin: EP0344597A2] To obtain a cylinder head of narrow construction and a small acute angle of valves arranged in a V in the case of a cylinder head with cover for internal-combustion engines with valve timing gear arranged in the cylinder head and a well, arranged between the valves of a combustion chamber, for the arrangement of a spark plug or an injection nozzle, it is proposed that a component serving for the arrangement of valve timing elements in the cylinder head be connectable to the cylinder head via a well tube. <IMAGE>
