Abstract (en)

Closing device for watch-straps, bracelets, jewels and similar comprising a plate (12) and pairs of strips (16) hinged together at one end (14) and coupled at the free end to couplable connecting means. These connecting means comprise two hollow bodies (20) and (42) open on the opposite side and a locking element (30) partially inserted in one of the hollow bodies (20) and maintained projecting from said body by means of elastic means (28), said projecting part (36) being insertable and couplable in the cavity of the second hollow body (42). The plate (12) and the strips (16) may be divided into at least two elements hinged together. Alternatively, there may be four elements, a main containing elements and the others becoming gradually smaller so that they may be inserted one in the other.
