Abstract (en)

When making wrappers for cigarette packs, a folder (4) consisting of a thin blade of a thickness smaller than 1 mm, is used for having the first flap (A) of a tubular wrapper (3) folded from one of the two long sides of the one end of a cigarette pack on one of the rectangular end sides thereof, and the said thin blade will be kept over the flap (A) having been folded on the one rectangular end side of the cigarette pack, until the two side folds (B) formed from the two short sides of the one end portion of wrapper (3) will have been folded on the same rectangular end side of this cigarette pack. Thus, the two side folds of wrapper (3) will be folded on the thin blade of folder (4), and this folder (4) is then slipped out from in between the flap (A) lying thereunder and the two side folds (B) placed thereupon.
