Abstract (en)  
[origin: EP0345157A1] It is of the type comprising a well (2) formed in and opening out in the lower part of the hull (3) of the floating structure, a connecting cable (6) passing through the well and connected to the load (5), and it is characterised in that it comprises a movable recovery unit (8) which is traversed by the connecting cable (6), the recovery unit (8) being connected to the floating structure (1) and being capable of being made integral with the floating load (5) in order to fasten it securely in the well (2). Application in particular to the retrieval of floating loads. <IMAGE>
