Abstract (en)

[origin: EP0345186A1] A check for Italian, Australian, pivoting or suchlike windows is composed of a fastening element (21) fixed to the edge (2) of an upright (3) of the stationary frame (4) of a fastening element (35) fixed to the edge (5) of an upright (6) of the opening frame (7), and of a compass arm (29) connected at its two ends (28, 30) to the two fastening elements (21, 35). To make it possible to use this check on windows equipped with a fitting having multiple barrier points (8), the fastening element (35) fixed to the edge (5) of the upright (6) of the opening frame (7) equipped with the said fitting (8) is formed from two enantiomorphous elements (36, 37) movable in the direction of displacement of the actuating rod (9) of the fitting (8), sliding in a groove made in the edge (5) and, to interact with one of the connections (31) of the compass arm (29), held jointly at one of their transverse edges (45) by blocking means (52, 53) interacting with the bottom (42) of the groove. <IMAGE>
