Abstract (en)
[origin: WO8905269A1] A package is disclosed which comprises a container (1) of plastics material having a neck (2) sealed by a closure, the container (1) and closure being encased by a film of plastics material (14, 15) having low gas permeability. The closure may be in the form of a drinking cup (3) having a primary seal formed by engaging a threaded portion on annulus (11) of the cup (3) with a threaded portion on lip (12) of neck (2), and a secondary seal formed by forcing an annular rib (13) into neck (2). The film (14, 15) having low gas permeability may be applied by heat shrinking or evacuating the space (16) between the film (14, 15) and container (1), or by filling the space (16) with an oxygen free gas, e.g. carbon dioxide, which is inert to the container's contents.
