Abstract (en)
[origin: EP0345379A2] The invention relates to an exercise device for muscle training having a lever arm, mounted on a frame, and a seat arrangement. The device consists of a self-stabilising frame, with rope deflection rollers arranged thereon, a weight plate, guided on columns by means of sleeves, a telescope, which is arranged vertically displaceably in or on a lever and adjusts the weight, and a seat wedge catch, arranged on the frame. <IMAGE>
