Abstract (en)

This cap comprises a pouring part which is intended to be mounted on the neck of a receptacle, and a cover mounted in an articulated manner on the pouring part by a spring-type hinge. According to the invention, the spring-type part is constituted by a combination of: - a rigid tab (14) arranged in the pouring part (3) and delimited by two slots which are parallel to the axis of the cap and by two thinner zones (15, 16) which form a film-hinge and are oriented perpendicularly to the slots, one (16) of which is arranged in the junction zone between the pouring part (3) and the cover (8), and - by an elastically deformable zone (17) which is arranged in the cover (8) in the extension of the rigid tab (14). Application in equipping bottles.
