Abstract (en)

Aqueous surface treatment compositions for polymer fibres based on a resin formulation were to be improved in respect of the textile processing properties of the fibres treated therewith and the adhesion of the fibres to a matrix. This was possible by combining . 1 - 30% by weight of a polar phenolic resin of the resol type . 2 - 40% by weight of a resol-crosslinkable copolymer of a free radical polymerisable aromatic hydroxymethyl and/or methylhalogen compound and water to 100% by weight, and also if desired up to 5% by weight of further adhesion promoters.

Abstract (de)

Bei wäßrigen Oberflächenbehandlungsmitteln für Polymerfasern auf Basis einer Harzzubereitung sollte die textile Bearbeitbarkeit der damit behandelnden Fasern und die Bindungsfestigkeit der Fasern zu einer Matrix verbessert werden. Dies gelang dadurch, daß man - 1 - 30 Gew.-% eines polaren Phenoplasts vom Resoltyp - 2 - 40 Gew.-% eines mit Resolen vernetzbaren Copolymeren einer radikalisch polymerisierbaren aromatischen Hydroxymethyl- und/oder Methylhalogenverbindung sowie Wasser zur Ergänzung auf 100 Gew.-%, wobei gewünschtenfalls bis zu 5 Gew.-% an weiteren Haftverbesserern miteinander kombiniert.
