Abstract (en)
[origin: EP0345459A2] In a pneumatic adjusting device, especially for central locking systems in motor vehicles, with a housing, with a piston rod mounted displaceably in the housing, with a piston connected to the piston rod and forming together with a housing part a pressure space, with a pneumatic pressure connection connecting the pressure space to a pressure source and with an electrical switch actuatable as a function of the position of the piston rod in relation to the housing, in order, among other things, to reduce the amount of space required, the switch is arranged in the pressure space, and the switch can be actuated by the piston. <IMAGE>
