Abstract (en)  
An emergency shelter (1) for use in an ambient polluted by gas, noxious substances dispersed in the atmosphere and the like. The shelter comprises a base (2) and a deformable envelope (3) of impermeable elastomeric material forming a closed space for lodging a plurality of persons. The envelope walls comprise at least two superimposed sheets (6, 7) forming a closed air-space (8) inflatable with a fluid under pressure and means (20, 21) for regulating the overpressure of the fluid with respect to the outer ambient. Inside the shelter there are masks for the individual breathing with the relative valves associated to the walls.
