Abstract (en)

[origin: EP0346230A2] Closing device with pouring means, especially for receptacles containing a powdered, granular or similar product to be dispensed, having an orifice capable of being opened and/or closed so as to coincide with the actuation of a movable part which it possesses. The said movable part (21) is a part mounted pivotably counter to the action of elastic return means about an axle (33) produced in one piece with a second part (20) forming the rest of the closing device and also providing the means (22) of mounting the closing device on the receptacle which it is to equip. The invention is used as a closing device of a receptacle for food products, such as chocolate powders or the like. <IMAGE>
