Abstract (en)

[origin: EP0346754A2] Process for correcting defects in coatings, in particular dust inclusions, on work piece provided with highly elastic coatings. In order to be able to eliminate, by grinding and redressing, visual defects which occur when using highly elastic lacquers, that is to say in particular 2K polyurethane lacquers based on polyester, according to the invention after grinding the area to be polished is supercooled. The subsequent polishing process is carried out in a temperature range of the lacquered area to be polished of at least -40 DEG C to -10 DEG C.
