Abstract (en)

A chimney flue liner section comprising a tubular member (10) having a heat insulating fibrous sheet form member (12) located therearound and having end sections (11) arranged to interfit when located one above the other. A flue sealing joint is also disclosed for locating between adjoining sections (10) of chimney flue liners, comprising a metal band (16) having at least an inner layer (17) of heat insulating fibrous material adhered thereto. Further a method of relining a chimney flue comprises locating within the chimney flue a plurality of chimney flue liner sections one above the other, locating fire resistant jointing compound in the joints therebetween and locating a flue sealing joint therearound at each joint therebetween.
