Abstract (en)  
[origin: EP0347212A2] The present invention relates to improvements to adjustable seating, particularly wheel chairs. The invention encompasses a method of joining a collar member 52 to an elongate member 55, which acts to support a component of the seat. The invention further relates to means for providing adjustment for a side bolster 81 in which a cylindrical support member 86 is slidably and rotatably engaged in a tubular frame portion 26. Additionally a method of providing adjustment to the relative positions of the back rest 27, 28 and the seat cushion 19 is also described.
