Abstract (en)

[origin: EP0347371A1] The crushing tongs, comprising a tongs body (7) for receiving two tongs parts (1, 1') which are each pivotable via their own centre of rotation (2, 2') and which, away from the centre of rotation, are divided up into a tongs lever (3, 3') for applying the force and a cutting lever (4, 4') for exerting the crushing force, has on the cutting lever (4, 4') means (5, 60) for detachably fastening the tongs bumps (12, 61, 63). Severing blades (6, 6') for severing reinforcements can be provided in the region of the cutting levers (4, 4'). The detachable tongs bumps (61, 63) can be detachably fastened in a bump bed (60) which is arranged detachably on the cutting lever (4, 4') or integrally formed thereon. A plurality of tongs bumps can form a working profile which differs from another working profile, which is formed from the same or a different number of tongs bumps, in the crushing action. <IMAGE>
