Abstract (en)
[origin: EP0347491A2] The invention relates to electronic partner search apparatuses which are designed such that they are divided into apparatuses intended for men and for women, that all apparatuses are equipped with a transmitter and a receiver, that the transmitting frequencies and the receiving frequencies of the apparatuses intended for men and of the apparatuses intended for women are changed over in each case and that a visual and/or audible signal is emitted if a device registers the response of its own receiver when the transmitter is switched on. Thus, only partners of different sexes can have contact with each other. <IMAGE>
