Abstract (en)

[origin: EP0347607A2] A method and a device are provided for feeding a product to be sprayed, namely paints and lakes, to a plurality of spraying stations by means of a common spraying product ring feeder, pressure, speed, volume stream and/or mass stream of the spraying product flowing in the ring feeder being continuously monitored and matched to the respective requirements in such a way that the spraying product flowing in the ring feed is treated as carefully as possible and thus, even with long circulation times of the product to be sprayed, adverse effects on the quality of the product to be sprayed are avoided. <IMAGE>
