Abstract (en)
[origin: EP0347673A2] A sports shoe, in particular a tennis shoe, with, provided in the outsole region, wear-resistant parts for increasing the wear resistance of the sole material, is to be designed in such a manner that the resistance to abrasion of the outsole, in particular in the toe region or in other edge regions of the outsole, increases significantly and there is nevertheless maintained an adequate braking effect by means of the material of the outsole or of the outsole edge. This is achieved by forming or subsequently inserting into the outsole (2) in the upwardly drawn edge (3) of the toe region (4) of the outsole (2) pieces (7) made of one of the materials oxide ceramic, metal carbide, metal nitride or hard metal in such a manner that the surface (8) of the pieces (7) ends at least approximately flush with the edge surface (9) of the outsole (2). <IMAGE>
