Abstract (en)
[origin: US5003872A] A device for applying color to a block of a tampon printing machine includes a coloring and wiping device which is constructed as a bottomless hollow body and can be moved toward and pressed against the block with a pressing device. The pressing device is at least one magnet arranged in the hollow body. The magnets are arranged in pocket-shaped recesses at the end faces of the square hollow body. It is also possible to provide a stirring mechanism in the hollow body and to arrange the magnets in downwardly open chambers or an annular groove of the stirring mechanism.
