Abstract (en)  
[origin: EP0347900A1] Foldable anchor having at least three anchor palms (2) articulated on the base (1.3) of a central shaft (1.1) in such a way that these anchor palms (2) can be placed to the inside against the shaft like an umbrella against the action of an elastic expansion member (4) and can be fixed in this position by means of an annular locking element (7) arranged to be longitudinally displaceable on the shaft, an anchor or hauling line being attached to the locking element so that, by jerking the line, the locking element (7) can be moved into a position releasing the anchor palms (2), in the course of which the locking element (7) can be moved into the anchor-palm release position against the action of an, in particular adjustable, elastic element (13, 14, 15). <IMAGE>
