Abstract (en)

The machine lays weatherproof sheet supplied in rolls (1), and consists in a self-propelled bearing structure (3) the front end of which affords a cradle (4) for the support of at least one such roll disposed with its axis horizontal and lying transverse to the machine's direction of movement; also, at least one cylindrical roller (5) lying parallel with the roll and adjustable for height at least down to a lowered position in which it presses the sheet material down onto the surface being treated, and torches (13) that soften the sheet as it passes over the roller (5).
