Abstract (en)

[origin: EP0348382A1] An annular primer (5) for firearm ammunition has a hollow ignition ring (6) receiving a detonating agent (7). In order to obtain a functionally reliable annular primer (5) which can be produced in a simple way and which can be used independently of additional abutments, the ignition ring (6) has an essentially U-shaped, axially oriented cross-section, of which the inner leg (6a) and preferably the base (6b) are reinforced in relation to the outer leg (6c). <IMAGE>
