Abstract (en)

[origin: EP0348730A1] The invention relates to a device for shifting components, and in particular for shifting a stack, comprising covers to be packaged, from a delivery device to a packaging station with the aid of a cylinder, having no piston rod, which possesses compressed air supply ducts, seals and deflection rollers in its head pieces, together with a tensioning means which connects the piston to a dog for a slide. The essence of the invention resides in the fact that the piston, at the start of its working stroke, stands at the pressure side of a pressure chamber. <IMAGE>
