Abstract (en)
[origin: EP0348789A2] The invention relates to a tray (1) for blank forms which consists of containers (2) which can be stacked either offset or in a straight line and can be latched together in the selected stacking position. Each container (2) has a bottom (3), two side walls (4) and a rear wall (5). The latching is effected via corresponding latching devices (6) which are effective between two side walls (4) situated one above the other. The containers (2) and their individual parts consist of plastic, the bottom (3) being reinforced by transverse ribs (38). The rear wall (5) of the containers (2) is of closed construction and has a straight top edge (24). Provided on the underside (19) of the bottom (3) of the containers (2) are, furthermore, longitudinal ribs (25) which rest on the top edge (24) of the rear wall (5) of the container arranged below it in each case and which thus effectively prevent papers contained in the tray (1) for blank forms from slipping through. <IMAGE>
