Abstract (en)  
[origin: EP0348790A1] The invention relates to a drawer (1) with at least one exchangeable, adjustable and hollow partition (2). The side walls (3) of the drawer (1) have lock openings (5) arranged at regular intervals below the upper edge (4), the partition (2) being connected to the drawer box via locking bolts (6) projecting laterally and prestressed by spring elements (7), which locking bolts engage in each case in two locking openings (5) located opposite each other, and furthermore the locking bolts (6) being attached to slides (9) provided with grip surfaces (8), which slides are mounted displaceably in approximately rectangular slot guides (10) for unlocking counter to the spring prestress. The slot guides (10) open out into lateral edges (11) of the partition (2). The upper guide edge (12) of the slot guides (10) parallel to the upper edge (4) of the partition (2) is connected to the opposite lower guide edge (13) via a connection web (14), the connection web (14) being narrower than the wall thickness of the partition (2). The slide (9) is U-shaped in the plan view, with the result that the connection web (14) is covered by the slide (9) in the installed position. <IMAGE>
