Abstract (en)
[origin: JPH0266857A] PURPOSE: To easily manufacture a potential connector means by providing a contact plate having a support member in its synthetic housing and bending its end where an inserted connector peels the insulating part of an electric wire. CONSTITUTION: A support web 15 formed by bending a part of a contact plate 2 at right angles and another support web 15a arranged symmetrically to the web 15 form therebetween a tapered insertion space 16 which is open upward and downward. The webs 15 and 15a are tapered in their interval in their opposed direction. The contact plate 2 of a housing 1 is perforated at its transverse edge regions 9a and 10a with holes 17 in a row for its positioning. An inserted connector 4 has a bent region 25 for enclosing the end of an electric wire and a contact region 26 which conforms to the webs 15 and 15a so as to be fitted into the space 16. The simple structure facilitates the manufacture of a connector means which is easily handled.

Abstract (de)
Die Erfindung betrifft einen Potentialverbinder, bei dem die abisolierten Enden mehrerer elektrischer Leitungen in einem Verbinderelement zusammengefaßt sind, wobei ein Kunststoffgehäuse (1), in dem eine Kontaktplatte (2) aus elektrisch leitendem Metall angeordnet ist, die Lagerelemente (3) für elektrische Steckverbinder (4) aus z.B. Metallstanzteilen aufweisen, die an die abisolierten Enden elektrischer Leitungen gecrimpt sind.
