Abstract (en)

[origin: WO8807115A1] An awning with central fastening profile comprises a housing (1) having an inner space of approximately circular cross-section to receive the shaft carrying the material and a central support element forming at least one part of the housing. At least one continuous open chamber (4) provided with guiding or stopping strips (5, 6) is arranged on the outer side of the central support element (2). The chamber is provided with sliding, reinforcing profiles (7) which serve at the same time as direct or indirect means for fastening bearing blocks (11) for the pivoting arms, elements for limiting tilting, drive elements, or as a coupling, thereby enhancing the rigidity of the entire construction.
