Abstract (en)
[origin: EP0349738A2] The invention relates to a locking cylinder with a cylinder core which is mounted rotatably in a cylinder housing and in which are mounted tumblers extending into a key channel, wherein - a plate-shaped or cylindrical coupling part 6, 6a is mounted in an axis-parallel manner laterally of the key channel 3 and is movable in the axial direction, wherein, with the key 5 removed, the coupling part 6, 6a is in a first position in which at least one tumbler 4 is in the path of movement of the coupling part 6, 6a and prevents the coupling part 6, 6a from being displaced, - wherein, as a result of the insertion of the key 5, the tumblers 4 are moveable into a position releasing the coupling part 6, 6a and the cylinder core 1, and - wherein the coupling part 6, 6a is displaceable by the key 5 into a second position in which the coupling part 6, 6a couples the cylinder core 1 to a part 15 with a closing effect, especially to the locking bolt or a transmission part. <IMAGE>
