Abstract (en)  
[origin: EP0350031A2] The masking member (100) which is used to protect a part of an article from a surface treatment, consists of a thermoplastic resin in which an inorganic filler is mixed. Said masking member has a good mechanical strength and heat resistance so that said masking member can completely protect said part and can be reused. Further the thermoplastic resin as the material of the masking member can be saved and heat of combustion from the combustion treatment of the waste masking member can be also reduced since said inorganic filler is mixed in said thermoplastic resin as a non-combustible material.
