Abstract (en)

The bleaching effect at washing is increased by carrying out the washing in a wash water containing a hydrogen peroxide source and a bleach activator compound of the general formula $R-(A)_n-[(CHR_1)_x]_y-Q$ (I) or $\langle CHEM \rangle$ wherein R is a higher hydrocarbon group and Q is a group $-R_2-S(O)_2-O-M$. A bleaching system contains these compounds and a hydrogen peroxide source, preferably a perborate. The bleach activator compounds give decomposition products which are surface active compounds.
