Abstract (en)
[origin: EP0350528A1] A radiator, consisting of a plane holding frame (1) and a number of elements (4) which are held by the frame and extend parallel to one another and are adjoined by a plurality of lamellae (8) made of good heat-conducting material, contains electric PTC thermistors (6), as heat-emitting elements, which are in good heat-conducting contact with the adjoining parts of the radiator. In this manner, an overheating of the PTC thermistors, which could lead to an impairment of the heat emission of the same, is prevented. <IMAGE>
