Abstract (en)
[origin: EP0350577A1] An anchoring head (20) having two lateral holding portions (21) can be inserted, when using the device for suspending C-shaped sections in accordance with the intended application, in the transverse position relative to the longitudinal direction of a section between the profile legs (12) thereof which extend forth, in parallel, from the section profile web (11), in such a way that the marginal flanges (14) of the section, which are longitudinally inwardly folded at the longitudinal edges (13) of the profile legs (12) remote from the said profile web (11), are engaged from the rear by the holding portions (21) in each case in two engagement points remote from one another in the longitudinal direction of the section or, in planar manner, over a predetermined length. <IMAGE>
