Abstract (en)

[origin: EP0350611A1] Footwear with at least partial lining with a layer of flat flexible ventilating material (3) which is stable under pressure, which has longitudinal air-conductibility in the longitudinal extension direction and, communicating therewith, transverse air-conductibility in relation to at least one of its surfaces and which is stable under pressure in such a manner that the longitudinal air-conductibility and the transverse air-conductibility communicating therewith are maintained under normal pressure loads which arise during normal use of the footwear provided with the layer of ventilating material (3). <IMAGE>
