Abstract (en)

[origin: JPH0274681A] PURPOSE: To enable a deep dyeing such as excellent color fastness to light and color fastness to rubbing by dyeing leather with a pigment dispersion separated to fine particle diameter containing a specific compound to improve penetration thereof into the leather. CONSTITUTION: Leather is dyed by using a pigment dispersion divided to fine particle diameter of 50-500 nm and containing a compound of the formula [Ar is benzene or naphthalene; X is CH<sub>2</sub>-CH<sub>2</sub> and/or CH<sub>2</sub>-CH(CH<sub>3</sub>); 0 or (m-1) pieces of group A are each H, 1 or (m) pieces of the group A are each benzoyl and/or naphthoyl, 1 or (m) pieces of the group A are each CO-CH=CH-COOM or the like (M is a cation); R<1>, R<2> and R<3> are each H or a 1-4C alkyl; R is H and/or a 1-9C alkyl; (n) is 1-150; (m) is 2-12] to assist penetration thereof into the leather, and thus excellent leather dyeing with an excellent fastness and an excellent adhesive force is enabled.
